(New Dash continued)

Some of the new dash improvements and features will include:

- AM/FM radio and CD player incorporated in the center of dash which will make the controls and display panel much more convenient for the operator to see and use.
- Two cup holders will also be built into the dash for more comfort. The cup holders will be rubber inserts that are removable for easy cleaning.
- Instrument display screen will be located closer to the operator for ease of access to the control buttons for various screen features and functions.
- Heater and defroster outlet vents are also totally redesigned for 2012. The new design will allow the operator to direct maximum airflow to the windshield and to the door side windows. This improvement will drastically help in keeping the windows clear of moisture and defrosted for better visibility in all conditions.
- New dash console provides for more foot room between the lower side of the dash console side panel and the foot throttle pedal. This will be more comfortable for the operator wearing large winter snow boots.
- Blade control joystick handle and right arm rest will now be mounted in a new fully adjustable mounting bracket. This will allow the operator to adjust the arm rest and joystick handle position to provide the maximum arm and hand comfort.

**MATCHBOX® SNO-CAT® MODEL
WILL BE AVAILABLE EARLY 2011.
