## The Cat's Meow..

### Tucker Sno-Cat® New Delivery Checks.....

Upon receipt of your new Tucker Sno-Cat® vehicle take time to look for any fluid leaks caused by possible loose fittings or filters. The new machine is put through a 3 mile test while in final production to check systems including loose fittings and filters. The production area is 65 degrees and the machine is of course warm after its test. The machine is again checked while being loaded on to the transport truck, but if it is being delivered to a location with sub zero temperatures it is possible for fittings and filters to loosen because of contraction and expansion, so please take the time to check.

*New Model 2000XL on a Western Mountain Top*
